EXPERIMENT 3: Linear Regression

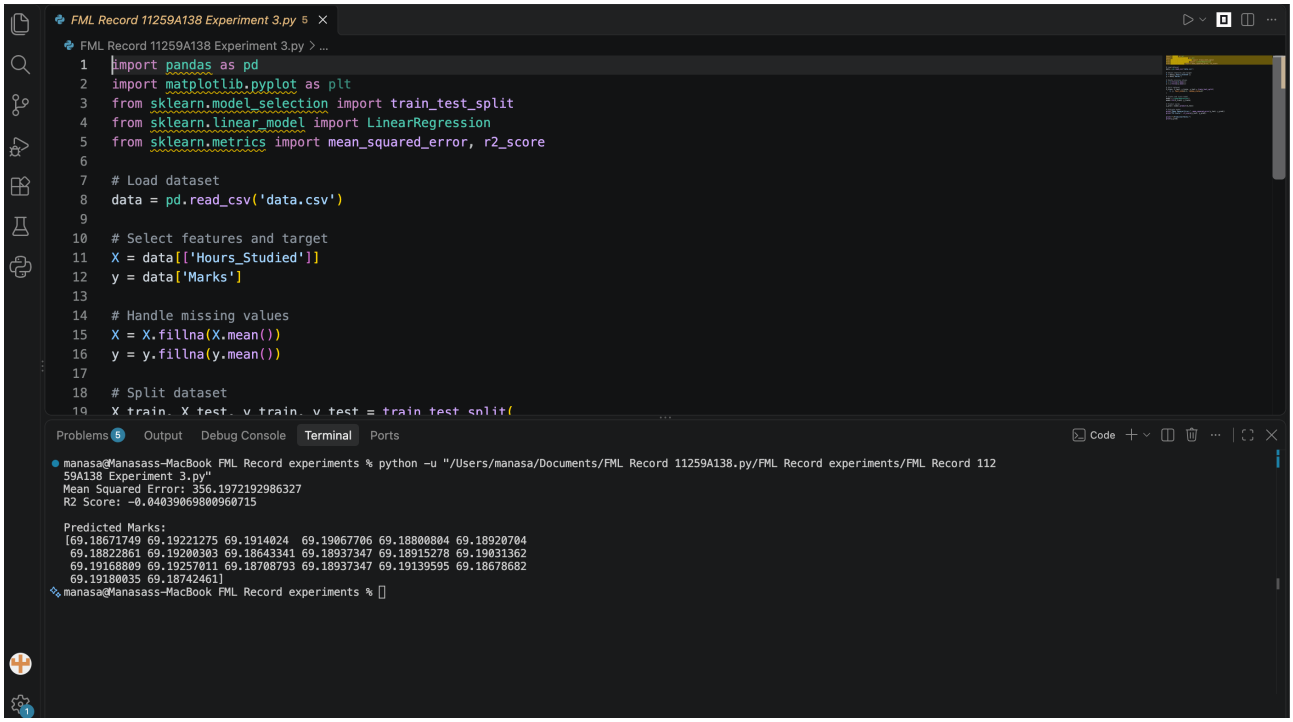

Aim:

To implement a Linear Regression model and evaluate its performance using Mean Squared Error (MSE) and the R^2 score.

Algorithm:

1. Import the required libraries.
2. Load the dataset and select the input and target variables.
3. Split the dataset into training and testing sets.
4. Create a Linear Regression model.
5. Train the model using the training data.
6. Predict the target values for the test data.
7. Calculate the Mean Squared Error and R^2 score.

Result:
Thus, the Linear Regression model was implemented succ
