Experiment 6: K-Means Clustering

Aim:

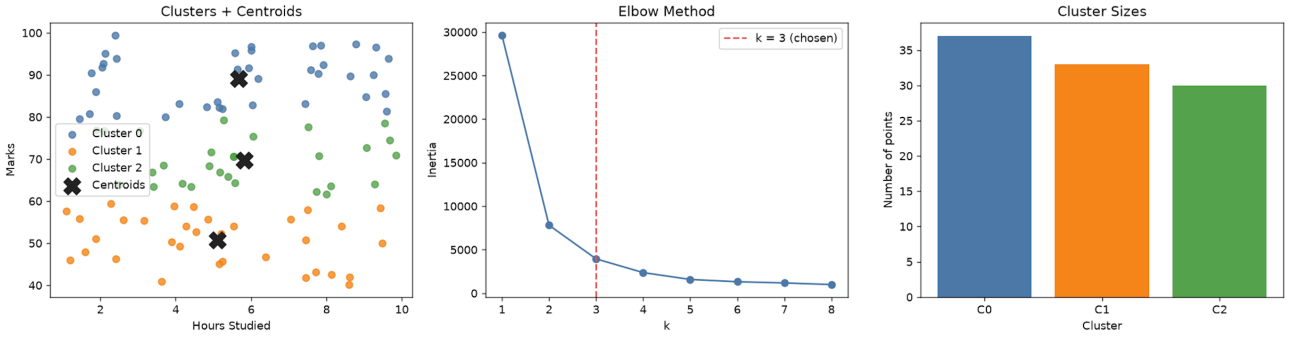

To perform K-Means clustering on the given dataset and group similar data points into clusters.

Algorithm:

1. Import the required libraries.
2. Load the dataset and select the required numerical features.
3. Create a K-Means clustering model with three clusters.
4. Fit the model to the dataset.
5. Obtain the cluster labels and centroids.
6. Visualize the clusters using a scatter plot.
7. Display the cluster centroids.

Experiment 6: K-Means Clustering - Visual Outputs

Result:Thus, K-Means clustering was performed succes
